

Interview Preparation

Dnyandeo Shekade — Frontend Developer (React.js / Next.js)

Questions sorted by priority — most important and most likely to be asked appear at the top, lower-priority behavioral questions at the bottom.

TIER 1 – HIGH PRIORITY (Always Asked)

Q Tell me about yourself.

Good morning, and thank you for giving me this opportunity. My name is Dnyandeo Shekade, and I am a Frontend Developer with over 2 years of experience in building responsive and user-friendly web applications. My core skills include React.js, Next.js, JavaScript (ES6+), Tailwind CSS, HTML, and CSS. I also have experience integrating REST APIs and converting Figma designs into pixel-perfect, responsive user interfaces.

Most recently, I worked as a Frontend Developer at Innovins Technologies, where I developed React.js and Next.js applications, integrated backend APIs, built admin panels, improved website performance, and collaborated with designers and developers in an Agile environment. Before that, I worked at Yuva Nexus Technologies, where I built frontend applications, created reusable components, integrated APIs, and transformed Figma designs into responsive web pages.

I have also worked on projects such as the Yuva Nexus Website and Billing Cart Web application, where I implemented dynamic routing, SEO metadata, responsive layouts, and optimized application performance using Next.js and Tailwind CSS.

I completed my Bachelor of Computer Science in 2024 and earned a Frontend Developer certification from Seven Mentor.

Now, I'm looking for an opportunity where I can contribute to challenging frontend projects, continue improving my technical skills, and grow as a React and Next.js developer while adding value to the organization.

Short version: Good morning, and thank you for this opportunity. My name is Dnyandeo Shekade, and I am a Frontend Developer with 2+ years of experience in React.js, Next.js, JavaScript, and Tailwind CSS. I have experience building responsive web applications, integrating REST APIs, and converting Figma designs into user-friendly interfaces. I recently worked at Innovins Technologies, where I developed React and Next.js applications, built admin panels, integrated APIs, and improved website performance. Before that, I worked at Yuva Nexus Technologies, developing responsive web applications and reusable UI components. I completed my Bachelor of Computer Science in 2024, and now I'm looking for an opportunity where I can contribute my frontend skills, learn from experienced teams, and grow as a React and Next.js developer.

Q Talk about your experience.

I have over 2 years of experience as a Frontend Developer, primarily working with React.js, Next.js, JavaScript, and Tailwind CSS. During this time, I have built responsive web applications, integrated REST APIs, and developed reusable UI components.

At Innovins Technologies, I worked on React.js and Next.js applications, built admin panels, integrated backend APIs, improved website performance, and collaborated with designers and developers in an Agile environment. Before that, at Yuva Nexus Technologies, I developed

responsive web applications, converted Figma designs into pixel-perfect interfaces, and worked on reusable components and performance optimization.

These experiences have strengthened my frontend development skills and taught me how to build clean, responsive, and user-friendly applications while working effectively as part of a team.

Short version: I have over 2 years of experience as a Frontend Developer, working with React.js, Next.js, JavaScript, and Tailwind CSS. I have built responsive web applications, integrated REST APIs, developed reusable UI components, and converted Figma designs into responsive interfaces. I'm experienced in collaborating with teams and delivering user-friendly, high-performance applications.

Q Why should we hire you?

I have 2+ years of frontend experience, strong React.js and Next.js skills, and I'm a quick learner who enjoys building clean, responsive, and user-friendly applications.

Q Why are you looking for a new job? / Why are you leaving your current company?

I'm looking for a new opportunity to work on more challenging projects, improve my skills, and grow professionally as a Frontend Developer — better learning opportunities, more challenging projects, and career growth.

Q Why do you want to join our company?

I want to join your company because it offers opportunities to work on challenging projects, learn from experienced professionals, and grow my frontend development skills.

Q What are your strengths?

My strengths are problem-solving, responsive UI development, quick learning, and teamwork.

Q What are your weaknesses?

Sometimes I spend extra time perfecting the UI, but I'm learning to balance quality with deadlines.

Q Where do you see yourself in the next 3–5 years?

I see myself as a Senior Frontend Developer, leading projects, mentoring juniors, and building scalable web applications.

Q Current CTC, Expected CTC, Notice Period & Joining

Current CTC: ₹3.12 LPA (monthly salary around ₹25,800).

Expected CTC: ₹4.5–5 LPA, open to discussing based on role and responsibilities.

Notice Period: I can join immediately.

Work mode: Comfortable with both work-from-office and hybrid models.

Currently interviewing: Yes, exploring a few opportunities that match my skills and career goals.

Q Do you have any questions for us?

Yes. Could you tell me about the team I'll be working with, the technologies used, and the growth opportunities in this role?

TIER 2 – PROJECT & TECHNICAL QUESTIONS

Q What is the project? What problem does it solve? What was your role? Which technologies did you use?

Project: The Yuva Nexus Website, a company website built using Next.js.

Problem it solves: It helps showcase the company's services, blogs, and projects with dynamic content and SEO optimization.

My role: I developed responsive UI, implemented dynamic routing, integrated APIs, and optimized SEO and performance.

Technologies used: Next.js, React.js, JavaScript, Tailwind CSS, and REST APIs.

Q What are your day-to-day responsibilities?

In my previous role, my day-to-day responsibilities included developing new frontend features, fixing UI bugs, integrating REST APIs, building responsive components, collaborating with designers and backend developers, participating in team meetings, and maintaining clean, reusable code.

Q What was the most challenging bug you solved?

One simple issue I solved was a responsive layout bug where the UI was breaking on mobile devices. I fixed it using Tailwind CSS responsive classes and tested it across different screen sizes.

Q How do you ensure code quality?

I write clean, reusable code, test my changes, and follow coding standards.

Q How do you prioritize multiple tasks?

I prioritize tasks based on urgency, business impact, and deadlines, then complete the most important ones first.

Q What do you do when you're stuck on a problem?

I first try to debug it myself, check the documentation, and if I'm still stuck, I ask a teammate or senior for guidance.

Q How do you estimate how long a task will take?

I break the task into smaller parts, estimate each one, and include extra time for testing.

Q What is your biggest achievement in your last project?

My biggest achievement was successfully building responsive UI, integrating APIs, and delivering features on time while maintaining good performance.

Q Tell me about a mistake you made and what you learned.

I once missed handling an API error, which caused the UI to break. I learned to always add proper error handling and test edge cases.

Q What motivates you as a frontend developer?

I enjoy building user-friendly interfaces, solving UI challenges, and learning new frontend technologies.

Q What do you do if API documentation is unclear?

If the API documentation is unclear, I first check the API response, discuss it with the backend developer, and test the API using Postman before implementing it.

Q Have you owned a feature end-to-end?

I have handled frontend features from UI development to API integration, testing, and deployment with the team.

Q Have you suggested performance improvements?

Yes. I suggested using reusable components, optimizing images, and reducing unnecessary re-renders to improve performance.

Q How do you break a large feature into smaller tasks?

I divide it into UI, API integration, state management, testing, and final review.

Q How do you handle production issues?

I first identify the root cause, fix the issue, test the solution, and deploy it after verification to avoid further problems.

TIER 3 – BEHAVIORAL & SOFT-SKILL (Lower Priority)

Q How do you communicate with designers?

I communicate with designers by discussing the Figma design, clarifying requirements, asking questions if anything is unclear, and sharing progress regularly to ensure the UI matches the design.

Q How do you explain a technical issue to a non-technical client?

I explain it in simple language, avoid technical terms, and use real-life examples.

Q Have you ever reviewed someone else's code?

Yes, I have reviewed teammates' code, checked for readability, coding standards, and suggested improvements when needed.

Q Have you mentored a junior developer?

I haven't officially mentored a junior developer, but I've helped teammates by sharing knowledge and solving frontend issues.

Q Describe a conflict you had with a teammate.

I haven't had any major conflicts with teammates. If there was a difference of opinion, I discussed it calmly, listened to everyone's ideas, and worked together to find the best solution for the project.

Q What would you do if you disagree with your team lead?

I would respectfully share my opinion, listen to their feedback, and support the final decision.

Q Have you ever missed a deadline?

No. I always plan my work, communicate early if there is any risk, and try to deliver on time.

Q Tell me about a time you worked under pressure.

I worked under a tight deadline to complete a feature. I prioritized the tasks, focused on the critical parts, and delivered it on time.

Q How do you learn new technologies?

I learn through official documentation, online courses, YouTube, and by building small projects.
